WSRT-Apertif

Apertif Surveys

Data from the Apertif surveys include imaging and time-domain data. The time-domain products consist of high-time resolution filterbank data in the PSRFITS standard. The imaging data products include the raw observations in the measurement set (MS) standard format. In addition, processed data products are available, including calibration tables, calibrated visibilities, multi-frequency synthesis continuum images, polarization images and

ASTRON VO

archives table

ASTRON Virtual Observatory

The Virtual Observatory defines a set of standards that can be used to download astronomical data. The ASTRON VO contains several image surveys, which are images in the FITS format. Since the VO is currently under development, more data types will be available in the future.

LOFAR-LTA

LOFAR LTA data

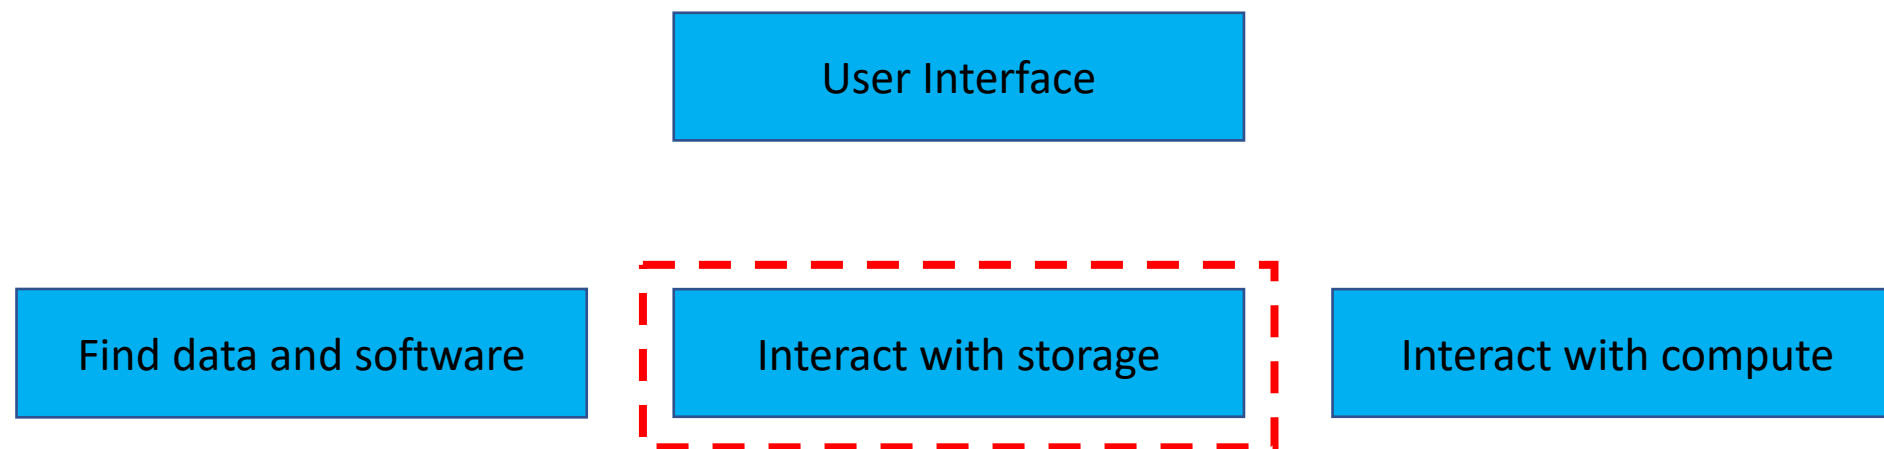

The data from all LOFAR cycle, commissioning and DDT projects since 2013 are stored in the archive. The interferometric data products that can be found include raw, pre-processed data in the measurement set (MS) format, and the products from the calibration, imaging and long baseline pipelines. In the case of beamformed observations, raw data are available in HDF5 format as well as higher-level data products including de-dispersed time series.

Zooniverse

Zooniverse Classification Database

The Zooniverse is the world's largest and most popular platform for people-powered research. This research is made possible by volunteers — more than a million people around the world who come together to assist professional researchers. Our goal is to enable research that would not be possible, or practical, otherwise. Zooniverse research results in new discoveries, datasets useful to the wider research community, and

Datalake

Datalake

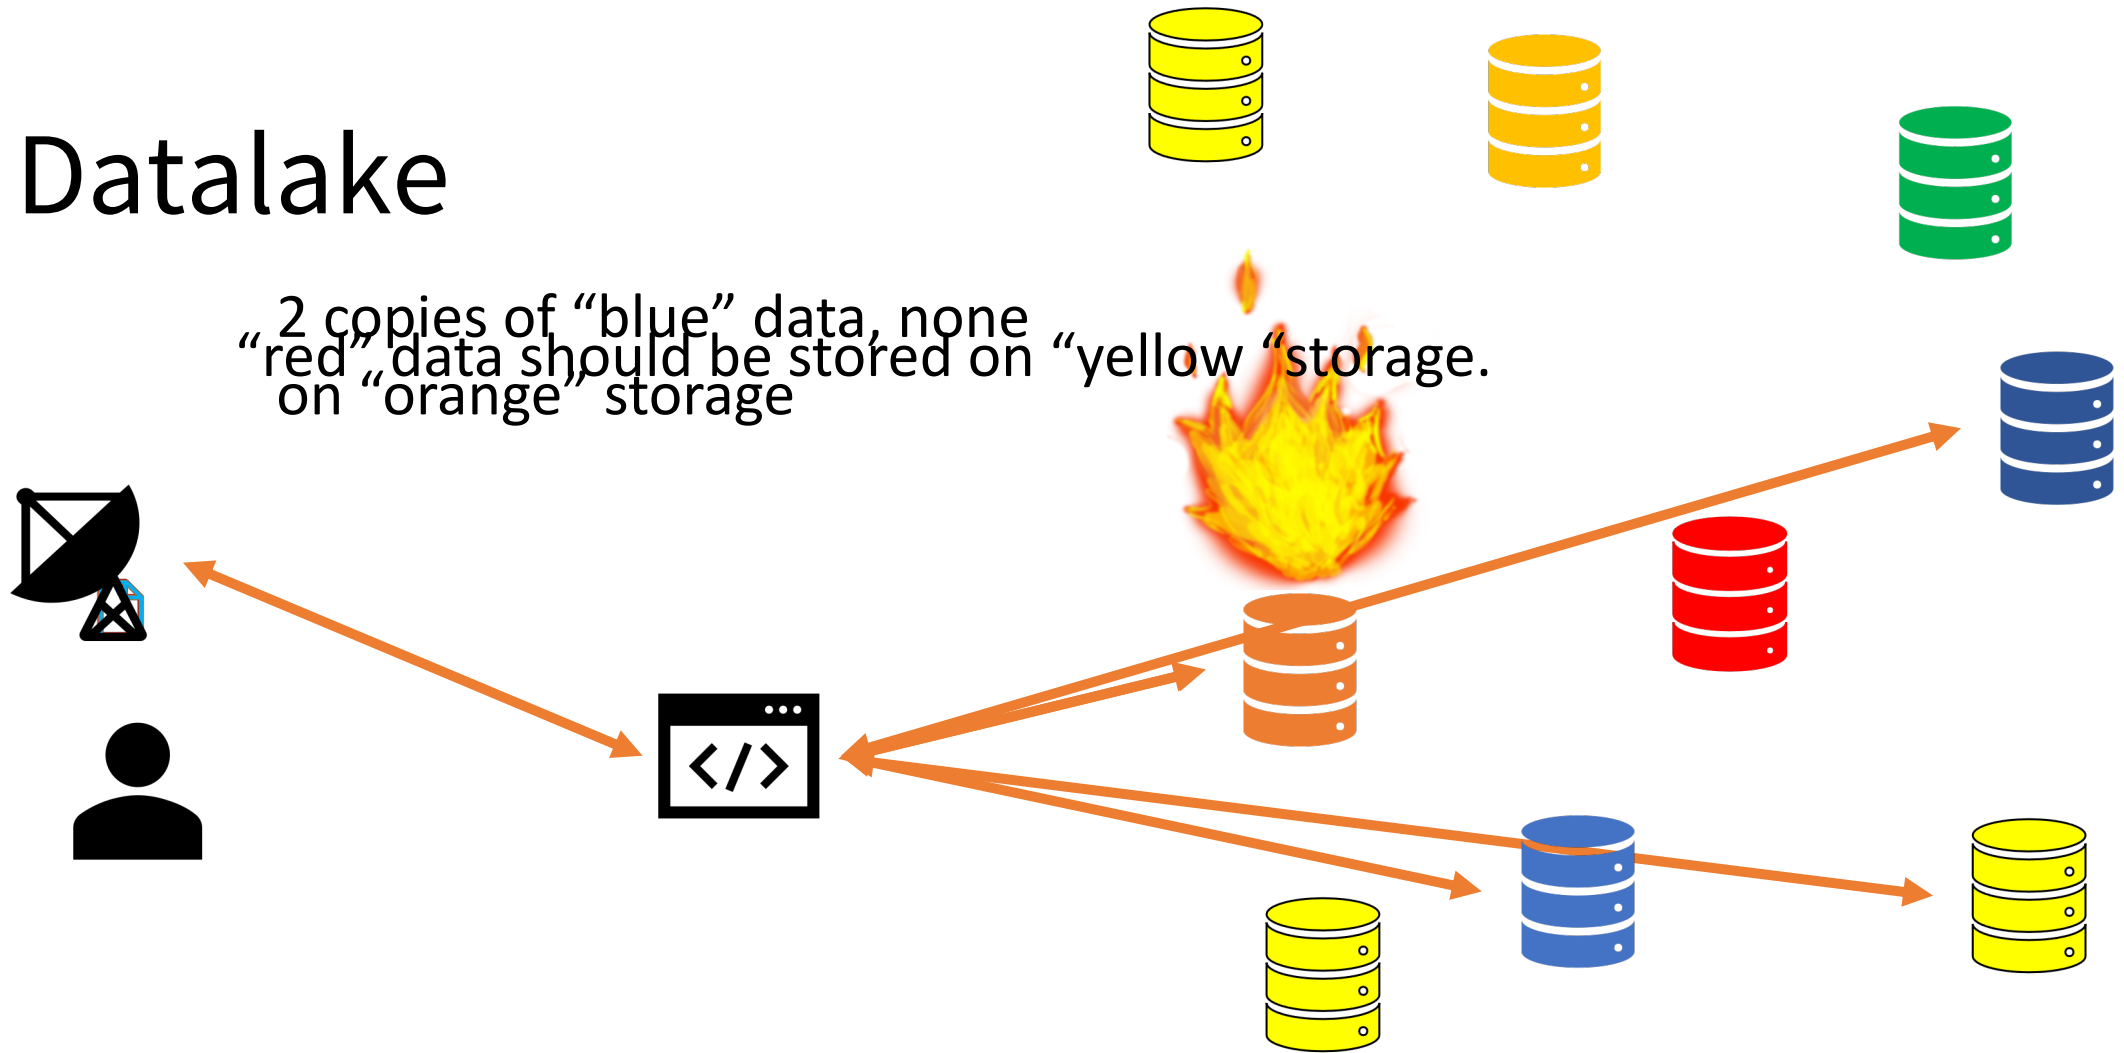

Rule 2: “red” data should be stored on “yellow” storage.

Rule 1: 2 copies of “blue” data,
none on “orange” storage

Datalake

“2 copies of “blue” data, none
“red” data should be stored on “yellow” storage.

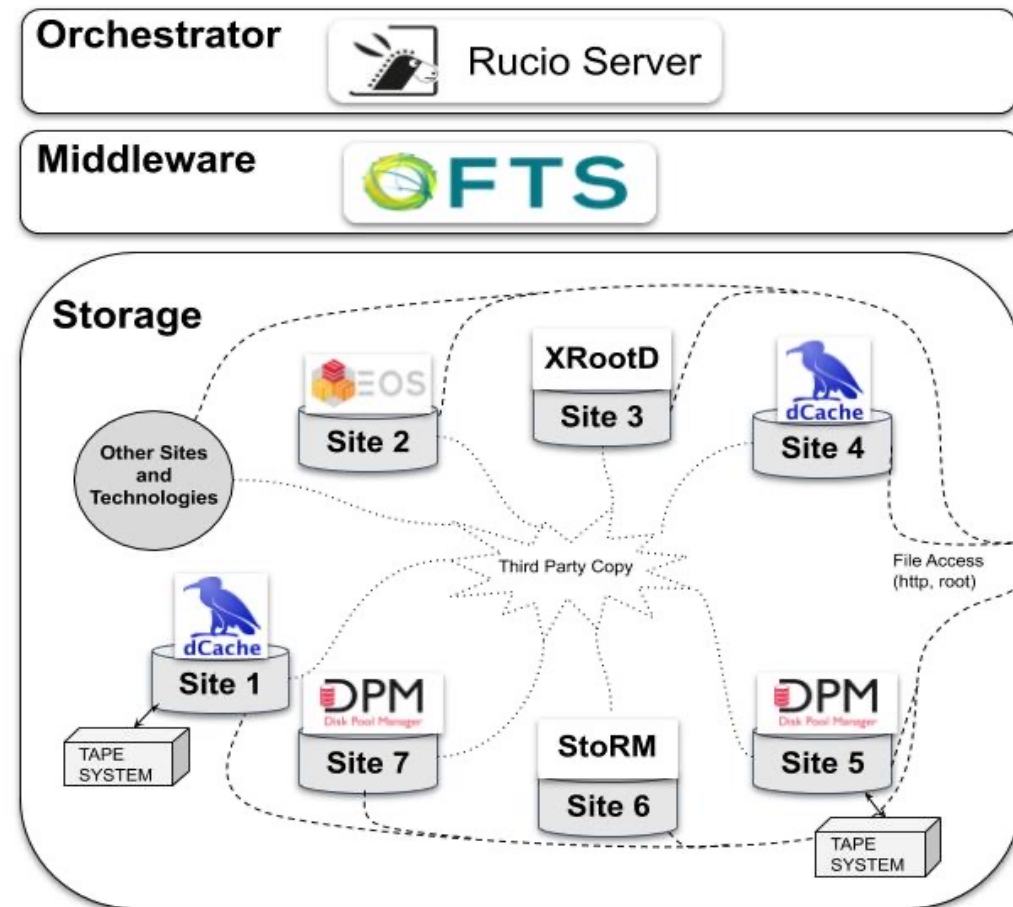

Datalake

Datalake

- Investigating the tool chain as used by CERN experiments to manage their data
- Rucio:
 - Rule-based orchestration
 - CLI, but also python libs, REST, webUI
- FTS:
 - Transfer management

Conclusions

- User access and data management are corner stones of the SDC
- The Science Analysis Platform eases the access to data by our users
- The datalake automates the data management from our facilities
